

Chevrolet Trax
Ybborah & Associates

It was a good experience. We would consider purchasing a similar vehicle for a meter-reading vehicle for our company.

-Tim Thornton
Lancaster Natural Gas Authority

It was a great opportunity to try different options before deciding the best option for our fleet.

-Tracy Smith
City of Rock Hill

Number of Demos: 8

Locations of Demos:

Columbia, Chester, Greenville,
Greer, Lancaster, Rock Hill

Number of Drivers: 16

About CNG:

Natural gas is an odorless, colorless, non-toxic gas found in conjunction with petroleum deposits. The use of compressed natural gas (CNG) as an alternative fuel reduces vehicle emissions substantially. Most vehicles can be retrofitted with after-market CNG conversion kits. However, some auto manufacturers are producing vehicles with CNG capabilities off the factory floor.

PROS

The Trax felt very safe and there were very few differences from a conventional gas vehicle.

CONS

The car did not accelerate as fast as the conventional gas vehicle.

About SADI: The Southeast Alternative Fuel Demonstration Initiative (SADI) is a US Department of Energy project focused on the increased adoption of alternative fuels in the Southeast region of the United States, by engaging project partners in demonstrations for public and private fleets.

Clean Cities Coalitions throughout South Carolina, North Carolina, and Tennessee worked with technology partners to provide opportunities for fleets to demonstrate a wide range of alternative fuel vehicles.
